

Features

- Compliant with AEC-Q200 Rev-C-Stress Test Qualification for Passive Components in Automotive Applications
- Operating temperature range up to 125 °C
- Low thermal derating factor
- Higher hold currents at elevated temperature
- Choice of operating cuttents
- RoHS compliant* and halogen free**
- Resettable fault protection of general electronic equipment
- Agency recognition: US

PRCP-RHT Series - Polymer Resettable Circuit Protectors

Environmental Characteristics

Operating Temperature.....	-40 °C to +125 °C	
Storage Temperature.....	-40 °C to +85 °C	
Passive Aging.....	+85 °C, 1000 hours.....	±15 % typical resistance change
Humidity Aging.....	+85 °C, 85 % R.H. 1000 hours.....	±15 % typical resistance change
Thermal Shock.....	MIL-STD-202, Method 107.....	±10 % typical resistance change
	+125 °C to -40 °C, 10 cycles	
Vibration	MIL-STD-883C, Method 2007.1, Condition A	No change

Test Procedures And Requirements For Model PRCP-RHT Series

Test	Test Conditions	Accept/Reject Criteria
Visual/Mech.....	Verify dimensions and materials.....	Per P.R.C.P. physical description
Resistance.....	In still air @ 23 °C.....	R _{min} ≤ R ≤ R _{1max}
Time to Trip.....	At specified current. V _{max} . 23 °C	T ≤ max. time to trip (seconds)
Hold Current.....	30 min. at I _{hold}	No trip
Trip Cycle Life.....	V _{max} , I _{max} , 100 cycles.....	No arcing or burning
Trip Endurance.....	V _{max} , 48 hours.....	No arcing or burning
Solderability.....	MIL-STD-202, Method 208.....	95 % min. coverage

How to Order

Product Designator	PRCP - RHT 750 -
Series	RHT = High Temperature Radial Leaded Component
Hold Current, I _{hold}	070 - 1300 (0.70 - 13.00 Amps)
Packaging Options	- = Bulk Packaging - 2 = Tape and Reel*

*Packaged per EIA 486-B

*RoHS Directive 2015/863 Mar. 31 2015 and Annex.

**NIDEC COMPONENTS follows the prevailing definition of "halogen free" in the industry. NIDEC COMPONENTS considers a product to be "halogen free" if (a) the Bromine (Br) content is 900 ppm or less; (b) the Chlorine (Cl) content is 900 ppm or less; and (c) the total Bromine (Br) and Chlorine (Cl) content is 1500 ppm or less.

Customers should verify actual device performance in their specific applications.

Applications

- Protection of automotive circuitry including engine control modules
- Overcurrent surge protection of electronic equipment required to operate at high operating temperature ranges
- Resettable fault protection of general electronic equipment

Typical Part Marking

Represents total content. Layout may vary.

Typical Time to Trip at 23 °C

The Time to Trip curves represent typical performance of a device in a simulated application environment. Actual performance in specific customer applications may differ from these values due to the influence of other variables.
